

A METHOD AND APPARATUS
FOR MANUFACTURING CHARCOAL GRILLED FOODS

ABSTRACT

5

A method and apparatus for manufacturing charcoal
grilled foods including a forge conveyer loading and
transferring charcoals burning after firing, a temperature
sensor detecting the heating power on the forge, a continuous
10 type forge of a charcoal fire consisting of an air blower to keep
heating power constant by means of adjusting air-capacity on
the basis of the heating power detected by the temperature
sensor, an ingredients transportation conveyer arranged over
the forge and appropriately turning over the ingredients while
15 transferring them.
